

Hema-Screen®

The most widely used methodology for early detection of colorectal cancer

- ◆ Simple and Economical
- ◆ Easy-to-use
- ◆ Results within minutes

Hema-Screen®

The cost-effective Hema-Screen® Lab Pack is designed to collect the specimen and perform the assay in the laboratory. This assay utilizes on-slide positive and negative monitors, provides results in two minutes, and is stored at room temperature.

Formatted to meet your needs, each test kit comes complete with Hema-Screen® developing solution, simple-to-follow patient instructions, wooden applicators, and a technical insert.

Stanbio offers a guaiac test format that helps eliminate the mess and odor associated with the collection and transport of fecal specimens.

**Colon
Cancer
at a
glance**

On average, your risk is about **1 in 20**, although this varies widely according to individual risk factors.

90% of new cases occur in people **50 or older**.

People with a first-degree relative (parent, sibling or offspring) who has colon cancer have **two to three times the risk** of developing the disease
