Diagnostics

Connect all of your point-of-care analyzers with EKF Link

	Feature	Advantage
Safe and secure	Integrated device connector	Connect multiple Point of Care analyzers securely and easily to LIMS/EMR.
Maximum flexibility	Advanced architecture	Hosted on your laptop, or server. Your data, your choice. Data accessible from most web browser using security protocol without installing any additional module.
Test integrity	Patient and QC tests management	Manage test in table or/and charts Check results Review exceptions Add comments
Traceability	Operator management	Manage Operator certification which reduces the risk for errors and helps to meet strict regulatory and quality requirements.
Visibility	Instrument management	Manage your instrument remotely, check their status, so you know if a device has to be replaced. Remote configuration, so you don't need to go physically on each instrument to change their settings.
Archive	Report management	You can export test results on pdf and csv report for further review.

EKF Link is a powerful middleware solution for healthcare providers, centralizing data management for point-of-care (POC) analyzers on one platform.

A flexible, open data management solution that seamlessly integrates with most vendors' point-of-care analyzers, allowing real-time management of patient test results, quality control (QC) data, operator management, and analyzer configuration.

Designed to provide a flexible and secure method for connecting point-of-care devices to hospital and laboratory IT systems, enabling the transfer of data from the analyzer to the hospital or laboratory database for subsequent processing. As an optional software platform, it can be installed on a PC or a server, allowing authorized users to access it anywhere at any time.

EKF Link Intended Use

EKF Link is a data and device management system that enables healthcare professionals to transfer, manage, store and display measurement results from point-of-care diagnostic testing analyzers. EKF Link enables the allocation of additional information to measurement results and facilitates the export or transfer of data for documentation purposes. EKF Link is intended to be used as an optional software application with EKF point-of-care analyzers and open to be interfaced to other vendor's point-of-care testing analyzers verified for connection with EKF Link. EKF Link facilitates the setting of configurable options of connected analyzers. EKF Link is not intended for use in patient diagnostics, screening, monitoring or for making treatment decisions. Such decisions should be made based on the results displayed on the POC device.
